EXPERIENCE

Gojek (GoTo Group)

Software Engineer 2, Transport (4W)

Bangalore, India

Apr 2025 – Present

- Owned backend design and execution for Cancellation Fee, launched Indonesia-wide, reducing post-driver-assignment cancellations by **21.4%**, with collected fees routed entirely to driver partners.
- Drove zero-downtime deprecation of MakeBookingService and WaitingFeeService into Transport OMS (**210 RPS**), FBON (**1.8K RPS**), Notifactor, and ETA Tractor at **100% availability**, spanning **Go** and **Clojure** services and cutting infrastructure cost and ownership ambiguity in critical booking flows.
- Launched two new service types (GoCar Cepaaat, GoCar Muraaah) and consolidated three legacy ones under a Gojek-wide grouping and branding initiative, owning the backend API changes for the grouping contract plus slot-system analysis and configuration, and coordinating phased rollouts across **90+ Indonesian cities** with **zero incidents**.
- Built the GoCar Mini-App on the **GoPay** platform with a **Next.js** frontend, reusing and extending the transport mini-program backend to bring GoCar booking, live tracking, and in-app payments to GoPay users without a Gojek app install.
- Own a transport-wide OKR to migrate **20 services** across three teams to standardized **Prometheus** metrics.
- Unblocked Loyalty A/B experimentation by plumbing customer tags through TRAPS (**156 RPS**), TPS, and TOMS into Pricing and Allocation, removing the need to hardcode experiment logic into core systems.

Consulting Software Engineer, Transport (4W)

Sep 2024 – Mar 2025

- Delivered foundational backend for the Transport WeChat Mini-Program in **Go** across ride discovery, fare estimates, and the booking lifecycle, and led its launch on the WeChat Store (Singapore) with external partner teams, reaching **S\$20K** in peak monthly GTV.
- Built a **Go** library that streamlined asset management for the Gojek mobile app, exposing reusable functions for fast, targeted asset retrieval across client teams.

Brane Group

Software Engineer, Platform Architecture Team

Bangalore, India

Apr 2023 – Sep 2024

- Led a four-engineer team building the Mapper Engine, integrating **40+ adapters** for external-to-internal data mapping with if-then-else transformation support.
- Cut bandwidth utilization **67%** and delivered a **3x throughput gain** by adopting **Avro** serialization and a schema registry for **Kafka** messages.
- Scaled the Kafka pipeline to **1M+ transactions** by tuning partitioning strategy and consumer group configurations.

Amazon

System Development Engineer I, Selling Partner FinTech

Bangalore, India

Jul 2022 – Mar 2023

- Built cloud infrastructure ingesting **100K events/day** via **SQS** and **AWS Lambda**, persisting payment artifacts to S3 and DynamoDB with CloudWatch dashboards and alarms.
- Cut vendor contacts **12%** by auto-routing currency-mismatch and draft-shipment errors to the correct resolution channels.

TECHNICAL SKILLS

Languages: Go, Clojure, Java, SQL

Distributed Systems & Data: Kafka, Firehose, Ziggurat, GoCraft, Avro & Schema Registry, PostgreSQL (Patroni), Redis, Elasticsearch

Infrastructure & Observability: Kubernetes, Docker, Prometheus, OpenTelemetry, Grafana, GitLab CI, Tencent Cloud, AWS (Lambda, SQS, S3, DynamoDB)

Frontend & Tooling: React, Next.js, Git, Cursor, Claude Code

EDUCATION

Maharaja Surajmal Institute of Technology

B.Tech in Electronics & Communication Engineering, CGPA: 8.8/10

New Delhi, India

2018 – 2022
